RE: HAZARDOUS MATERIALS INVENTORY REPORT

Dear Mr. Keith:

Enclosed is the report for the Hazardous Materials Inventory (HMI) conducted for the District on January 6, 7, 10, 13-17 and February 19-20, 2025. The HMI was conducted in accordance with requirements set forth by local, state, and federal regulatory agencies. This report is based on conditions and operations that existed at the time of the inspection. The information contained in this report does not certify that all locations, unsafe conditions, violations of state, federal, or local regulations or laws are in compliance, nor does it conclude that all possible infractions, hazards, or hazardous conditions were observed or reported.

The goal of our inspection was to (i) assist the client in evaluating its self-audit procedures, (ii) facilitate the identification of conditions which may pose a risk of injury and/or property damage, and (iii) provide recommendations and/or suggestions to help mitigate the risks identified. Keenan & Associates does not guarantee that it has identified every potentially hazardous condition existing on the client's premises. Similarly, it does not promise that following the recommendations contained in this report will eliminate all risk of injury or property damage.

It has been a pleasure to be of service to the District in the area of Loss Control/Risk Management and to assist you with providing a safe environment for the students and the general public. If you have any questions concerning this report, kindly contact me directly at (951) 715-0190, extension 1186 at your convenience.

Sincerely,

Kendall Birkett

- IV. LIMITATIONS
- V. PRIVILEGED AND CONFIDENTIAL
- VI. SHELF LIFE
- VII. SAFETY DATA SHEETS
- VIII. SITES AND AREAS INSPECTED
- IX. SUMMARY
- X. PROGRAM REVIEW
- XI. SITE SPECIFIC RECOMMENDATIONS

I. INTRODUCTION

Keenan & Associates conducted a Hazardous Materials Inventory (HMI) for the San Bernardino Community College District on January 6, 7, 10, 13-17 and February 19-20, 2025. Conditions noted during the HMI that directly relate to safety are listed in Sections IX and X of this report. All findings are listed with associated recommendations.

Kendall Birkett, Loss Control Advisor II, conducted the HMI and prepared the subsequent report. Clare Brooks, Project Coordinator, processed the HMI report.

II. ACKNOWLEDGEMENTS

Keenan & Associates would like to thank all the staff that assisted in completing the HMI.

III. SCOPE OF SERVICES

The primary purpose of the Hazardous Material Inventory (HMI) is to provide the District with a list of all the hazardous materials in the workplace. This will assist the District in complying with Title 8 of the Hazard Communication Regulations and also in completing its Hazardous Material Business Plan reporting requirements under the California Fire Code, California Code of Regulations (CCR), Title 24, Part 9, and California Health and Safety Code (CHSC) Chapter 6.95, Section 25505.

IV. LIMITATIONS

A sincere effort was made to identify hazardous materials at each location within the District. The locations are listed in the Sites Surveyed section. Although the Hazardous Materials Inventory was not an inspection or audit, it is viewed as an opportunity to communicate to the District those safety issues relating to hazardous materials management, which were observed during the course of the inventory.

The information in this report does not conclude that all possible infractions, hazards, or hazardous materials were observed. Keenan is not responsible for hazardous materials that may be located in areas in which only District staff may be aware and did not make Keenan & Associates aware of it.

Keenan's Hazardous Materials Compliance program services are intended to help clients identify and mitigate hazards and potential Hazardous Materials exposures. Keenan is not responsible for hazardous materials that may be located in areas in which only District staff may be aware of. While we are confident that our services will help our clients create a safer environment, we do not represent or guarantee that we were able to identify all potential hazards, find and inventory all hazardous materials at each site, or offer a fail-safe mechanism for dealing with them. Consequently, we make no promise or representation that clients will recognize improved hazardous materials and/or regulatory compliance fine savings, loss experience, or premium savings as a result of these services.

Keenan's Hazardous Materials Compliance program services are not intended to substitute for regular, ongoing internal hazardous materials program efforts. Nor are they intended to replace any required service that is to be routinely performed by licensed or certified service professionals (e.g., hazardous waste disposal contractors and hazardous waste haulers, etc.).

V. PRIVILEGED AND CONFIDENTIAL

This report on site assessments, prepared by Keenan, is intended strictly for the use of SWACC's legal counsel and only those District employees having a need to know in order to confer with legal counsel and/or to address conditions assessed in this report. To preserve and protect the confidential and privileged nature of this report, the report should not be copied or distributed by the District, except to persons in the "need to know" group, and should be filed and maintained in strict confidence by the District.

VI. SHELF LIFE

The life expectancy of chemicals can be affected by storage conditions. Ideal conditions (25 degrees C at 50% or less relative humidity) will support the maximum shelf life. These times are general and, since storage conditions vary widely, should be taken in that context. All chemicals should be dated upon receiving and again with a "first opened" date. All manufacturer/supplier expiration dates should be strictly adhered to.

Any chemical that has changed physical state over time, either a crystal/powder/etc. becoming liquefied or a liquid that has begun to crystallize, should be set aside for immediate proper disposal.

VII. SAFETY DATA SHEETS

In accordance with Hazard Communication Standard (HCS) (29 CFR 1910.1200(g)), chemical manufacturers and importers shall obtain or develop a Safety Data Sheet (SDS) for each hazardous chemical they produce or import. Employers shall have an SDS in the workplace for each hazardous chemical which they use.

Locations that are typically inventoried include, but are not limited to:

- Agriculture/Horticulture
- Health Sciences (i.e., Nursing, EMT)
- Aquatic Center
- Auto Technology
- Classified /Support Areas
- Construction Technology
- Cosmetology
- Custodial Supply
- Faculty Workroom/Copier Room
- Fine Arts
- Food Service/Cafeteria
- HVAC Supply
- Industrial Technology
- Jewelry
- Maintenance & Operations (Facilities)
- Natural Science (i.e., Chemistry, Life Science)
- Performing Arts/Scene Shop
- Photography
- Physical Education
- Power Plant(s)
- Warehouse

IX. SUMMARY

This was San Bernardino Community College District's initial Hazardous Materials inventory conducted by Keenan & Associates. The inventory was conducted at Crafton Hill College Campus, San Bernardino Valley College Campus, Economic Development & Corporate Training, and District Support Operations. At the San Bernardino Valley Campus, they completed construction on the new Applied Technology Building.

The District is taking a proactive approach in managing and maintaining its chemicals by having a hazardous material inventory conducted, business plans and its chemical disclosures completed. It also has made great efforts to ensure a safe environment when working with and maintaining chemicals. There were some common issues that were noted in the inspection such as: Proper labeling of secondary containers such as spray bottles continues to remain an issue. Each spray bottle or other secondary container should be marked with its contents, manufacturer, pictogram, and hazard level to sure it is used safely and in compliance with the Global Harmonizing System (GHS), OSHA 29 CFR 1910.1200.

The inventory should be carefully reviewed and an in-house assessment should be conducted annually to minimize unnecessary and expired hazardous materials. Keep in the mind that hazardous materials should be purchased in quantities that can be used during the academic year. There are recommendations below to improve container labeling, spill containment, and other chemical safety practices in various areas.

Reminder to ensure that any location where there are chemicals or waste being stored is advised to have the NFPA diamond shaped sign posted on its exterior doors. Cabinets should be labeled notifying that chemicals are inside. Each of the colored areas is recommended to contain the appropriate numeric warning rating for the hazardous materials within the building. The regulation is NFPA 704 Warning System, which states: Whenever large amounts a of hazardous materials are being stored and used, warning placards are required. These placards act as an immediate warning system for emergency service personnel, helping them identify the kinds of materials present and the dangers they pose.

This report contains a review of the District's chemical safety programs and lists general and site recommendations made to continue safe storage of hazardous materials and waste. Recommendations are ranked by High and Medium priority. The ranking system is designed to assist Districts with prioritizing concerns and recommendations.

X. PROGRAM REVIEW

Hazardous Communication

Priority Effective

Survey Findings:

In order to ensure chemical safety, information about the identities and hazard of the chemicals must be available and understandable to the employees. OSHA's Hazard Communication Standard requires the development and dissemination of such information. Ensure that the College does conduct hazardous communication training. All employers with hazardous chemicals in their workplaces must have labels and safety data sheets for their exposed employees and train them to handle the chemicals appropriately. SDS sheets were located in most areas where chemicals were used and/or stored. There were areas throughout the campuses that were not properly labeling the secondary containers.

Corrective Action:

Ensure the written Hazardous Communication Plan is reviewed on an annual basis and is readily available to all staff upon request (California Code of Regulations, Title 8, Section 5194). Ensure that contents of the unlabeled container(s) should be determined and the container(s) properly labeled. Review the safety data sheets of the hazardous materials stored at each chemical storage area and provide an appropriate hazard rating/placard for each category on the NFPA signage(per NFPA 704 Warning System). Employees should maintain copies of safety data sheets in their SDS binders.

Chemical Hygiene

Priority Effective

Survey Findings:

OSHA's Laboratory Standard specifies the mandatory requirements of a Chemical Hygiene Plan (CHP) to protect laboratory workers from harm due to hazard chemicals. The CHP is a written program stating the policies, procedures and responsibilities that protect workers from the health hazards associated with the hazardous chemicals used in that particular workplace. The College has a Chemical Hygiene Plan in place. The science chemical stockrooms appear to be in good condition. Separate cabinets are provided for corrosives, oxidizers, and flammables.

Corrective Action:

Ensure that there is a Chemical Hygiene Plan in place that it is reviewed annually and evaluated for effectiveness (Title 8, Section 5191 (e)(4)). That all applicable staff have received training on the Plan. The District should designate an employee as a Chemical Hygiene Officer (Title 8, Section 5191 (b)). Ensure that science instructors and lab technicians are conducting quarterly in-house inspections of their hazardous materials storage areas and safety equipment. Continue to periodically inspect hazardous materials for surpassed shelf-life and expiration dates. Ensure that ventilation hoods are inspected annually for airflow and remove unnecessary storage. Lastly, ensure that eyewash and deluge shower stations are tested and inspected monthly.

Hazardous Waste

Priority Effective

Survey Findings:

The District is currently using a vendor that comes out and disposes of the hazardous waste. It is good practice to monitor chemical waste and remove any chemicals no longer used or that the District is in need of by using a disposal company that will provide appropriate packaging, transportation, and disposal. To assist with the waste pick up, all chemicals should be collected, stored by hazard type, and marked waste for removal. The "Hazardous Waste" label should have the following list of information filled out: product name, hazardous properties, precautionary statements, name of generator, EPA number, and accumulation start date.

Corrective Action:

Ensure to conduct and document weekly hazardous waste area inspections (CCR, Title 22, Section 66265.174). Ensure that the District Emergency Procedures/Contingency Plan is updated and reviewed annually by the appropriate personnel (CCR, Title 22, Section 66265.31; 40 C.F.R., Section 265.31). For all hazardous waste areas, ensure that chemicals are properly sealed or contained, stored by hazard type and marked as hazardous waste for removal.

XI. SITE SPECIFIC RECOMMENDATIONS

Location: San Bernardino Community College

Priority: Medium

Description: The State's Hazard Communication Law requires appropriate labeling on containers of hazardous substances or mixtures having hazardous ingredients. Numerous containers were noted that have faded, missing or unreadable labels. Labels must include the identity of the hazardous substance(s), appropriate hazard warnings, precautionary statements, and the name and address of the manufacturer or supplier. Portable or secondary containers into which hazardous substances are transferred from labeled containers and are intended only for the immediate use of the employee who performs the transfer need not be labeled. Portable or secondary containers, used for storage or use by employees other than the transferee, must be labeled with the chemical identity and appropriate hazard warnings.

Status: Open

Additional details: None

Location: San Bernardino Community College | ECONOMIC DEVELOPMENT & CORPORATE TRAINING | Custodial Closet 108

Priority: Medium

Description: The eyewash station bottles have expired on February 03, 2012. The bottles should be replaced to ensure that they are fully functional.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Applied Technology Bldg - 121 Welding Back Lab Front Cages

Priority: Medium

Description: All compressed gas cylinders should be secured in the upright position with strong securing devices (chain, straps or clamps) to prevent accidental tip over. These heavy cylinders can injure people by falling on them directly or they can become dangerous projectiles if the regulator, cylinder valve or valve connection is damaged in a fall.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Applied Technology Bldg - Hallway Custodial Closet by 107A

Priority: Medium

Description: Spray bottles need to be properly labeled. Many custodial suppliers will provide appropriate labels for spray bottles, or the required information can be easily printed out on labels and applied by the

District. Each spray bottle or other secondary container should be marked with it's the Product Identifier, Signal Word, Hazard Statements, Precautionary Statements, Pictogram and the Name, Address, and Phone Number of the Manufacturer. All of this information can be found in the Safety Data Sheet.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Applied Technology Bldg - Welding Bldg T112B

Priority: Medium

Description: The fire extinguisher was not mounted. A unit that weighs 30 pounds or less should be remounted so that the top is no higher than 5' above the floor. A unit that weighs more than 30 pounds should be installed so the top is no higher than 3' above the floor.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Applied Technology Bldg - Welding Bldg T112B

Priority: Medium

Description: There was a spill present at the time of inspection. The cause of the spill should be determined and the spill cleaned up appropriately. The integrity of the substance container should also be checked to ensure proper storage to prevent further spills or leaks.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Art Bldg - North Work Area Flammable Cabinet

Priority: Medium

Description: All of the old, unused and inherently waste-like chemicals should be evaluated and properly disposed of. Storing old, unused or expired chemicals is an unnecessary risk that should be avoided whenever possible. Additionally, all chemicals in excessive quantities and/or beyond manufacturers' recommended shelf lives, should be properly disposed of.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Art Bldg - Rear Cover Storage by Room Art 126

Priority: Medium

Description: Ceramics Bags of minerals, cement, mortar, and other powders are being stored on the floor of the ceramics room. It was noted that many of the bags are leaking which allows substances to mix. Furthermore the spilled powders can become airborne, elevating respiratory hazards. Many of the leaking bags had illegible product information on them. All powdered substances should be stored in appropriate bins with closeable lids. The bins should be marked to include the manufacturer information, the chemical information, and major associated hazards.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Art Bldg - Workroom Art 111

Priority: Medium

Description: There was a spill present at the time of inspection. The cause of the spill should be determined and the spill cleaned up appropriately. The integrity of the substance container should also be checked to ensure proper storage to prevent further spills or leaks.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Art Building | Art Bldg - Room ART 128

Priority: Medium

Description: Several containers have labels that were missing or were hard to read. All old or missing labels should be replaced to include substance name, major hazard, and precautionary statements. If the substance is unknown, it should be quickly identified and relabeled to reduce the hazard of improper use or storage compatibly with other cleaning solutions.

Status: Open

Additional details: None

Description: Spray bottles need to be properly labeled. Many custodial suppliers will provide appropriate labels for spray bottles, or the required information can be easily printed out on labels and applied by the District. Each spray bottle or other secondary container should be marked with it's the Product Identifier, Signal Word, Hazard Statements, Precautionary Statements, Pictogram and the Name, Address, and Phone Number of the Manufacturer. All of this information can be found in the Safety Data Sheet.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | CTS Portable - Custodial Closet

Priority: Medium

Description: An unidentified solution is being stored in this location (see photo). The substance should be identified and properly stored and labeled or disposed of.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Gym Bldg - 109 Equipment Room Athletic Storage

Priority: Medium

Description: This chemical container is broken. The cause should be determined and the container inspected for proper storage. The container should be removed if no longer using. If the container is deemed waste it should appropriately marked as such and relocated to the waste storage area to ensure no further reaction occurs.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Health Life Science Bldg - Room 138B

Priority: Medium

Description: Chemicals should be stored at or below eye level to allow safe handling of chemicals. If this is not possible and higher storage is required, then an appropriate sized sturdy ladder, stool or portable step should be provided.

Status: Open

Additional details: None

Location: San Bernardino Community College | SAN BERNARDINO VALLEY COLLEGE | Maintenance & Operation Bldg - Room 109 - Grounds

Keenan SDS Quick Start Guide

Loss Control Consultant Name and telephone number:

Access Keenan SDS using URL:

Copy and paste the URL into your web browser.

The landing page is the first screen that appears when any employee visits your Keenan SDS site. The majority of the landing page displays the **locations** and **collections** of chemicals that are virtually stored on your site. Employees can search for chemicals and view the Safety Data Sheets that are organized into collections.

The **search** bar in the landing area allows employees to search for a Safety Data Sheet. Administrators in your Keenan SDS system have the option to open up this search to the entire repository or this can be limited only the districts inventory.

Access Keenan SDS using P&C Bridge

Log into P&C Bridge:

- Select **Resource** from the top tool bar
- Select **Keenan SDS** from the application list

The **Administration View** within your Keenan SDS site is organized in four main areas, which are named locations, collections, docs, and inventory.

There are three **search** options for employees without administrative access: Uploaded Sheets, Inventory and Repository. If Inventory is chosen, the general employee can only search through the safety sheets that have been added to a collection in the site. Uploaded Sheets refers to only those that have been uploaded into the site, regardless of whether or not they are in a collection.

The **poster** button takes you to a printable PDF with a QR code and link, which both lead you to the SDS inventory.

Keenan's Loss Control services promote safety awareness, and assist in the identification of conditions which may pose a risk of injury. We do not suggest that following our recommendations will eliminate all risk of injury or will result in improved loss experience.

Printing Container Labels:

Container labels can be created and printed for any Safety Data Sheet in the system. To print a container label, follow the directions below.

- First, select the desired Safety Data Sheet and click on the **Container Labels** button.
- Next, select the size of the labels you would like to print.
- Once a size is chosen, select the number of labels you would like to print by clicking on the first and last label of the selection (see screenshot to the right).
- When your selection is finalized, click the blue Print button at the bottom of the page.

The screenshot shows a web interface for selecting container labels. At the top, it says "SECONDARY CONTAINER LABEL" and has a "BACK TO TEMPLATES" button. Below that, it says "AVERY 5160" and "Select the first and last label you would like to print." There is a grid of 14 small rectangular boxes arranged in two columns of seven. The first box in the first column and the last box in the second column are highlighted with a blue border. Below the grid, it says "Labels 01 - 014" and "NUMBER OF LABELS: 14". At the bottom, there are two buttons: a blue "PRINT" button with a checkmark icon and a red "CANCEL" button with an 'X' icon.

Keenan's Loss Control services promote safety awareness, and assist in the identification of conditions which may pose a risk of injury. We do not suggest that following our recommendations will eliminate all risk of injury or will result in improved loss experience.

Keenan SDS Administrative Guide

Loss Control Consultant Name and telephone number:

Access Keenan SDS through P&C Bridge

Log into P&C Bridge

- Select **Resource** from the top tool bar
- Select **Keenan SDS** from the application list

The Administration View is organized in four main areas.

Locations: you can create and organize virtual locations for each building.

To Add a New Location:

- First, click on the **Locations** tab.
- Click the + **Location** button.
- Type the name of the location.
- Click **Create**.
- Click the eye icon to the right and change to **Viewable**.

To Delete a Location:

- Click on the ☰ icon to the right of the location.
- Click **Delete**.
- Lastly, click **Yes**.

Collections: are used to store Safety Data Sheets and documents for each department. To set up and maintain your collections create one collection for each of the major areas within a building.

To Create a New Collection:

- Select the **Collections** tab from the top.
- Click + **Collection**.
- Name the collection.
- Click **Create**.

To Add Collections to a Location:

- Click over the **Locations** tab.
- Select the location you wish to add a collection to.

Keenan's Loss Control services promote safety awareness, and assist in the identification of conditions which may pose a risk of injury. We do not suggest that following our recommendations will eliminate all risk of injury or will result in improved loss experience.

- Click + **Collection** and the list of collections will appear.
- Click the desired collection from the list.
- You can also add a single SDS to a **Location** by clicking the + **Add Item** button, selecting the **Safety Sheet** and searching the repository.

Once the information is entered, check the boxes for any collections you would like to add the sheet to.

Lastly, click the **Save** button in the upper right hand corner. The system will confirm the upload with the message below.

Success! You have finished processing your uploaded Documents!

To add to the **Locations** area, click on the **Locations** tab and click the + **Add Item**. You can add the document to a specific location by first selecting the specific location, then clicking the + **Add Item** button.

My Uploads:

To view all of your uploaded safety sheets and site documents, go to the **My Uploads** section of the **DOCS** tab and select the list you would like to view (Safety Sheets or Site Documents) by using the drop down menu.

Inventory: lists all of the Safety Data Sheets that have been saved to your site’s inventory. The **Filter Results** box can be used to search for products.

Name	Effective Date
01296, DRY CHLORINE BLEACH	1989-11-30
1000 PPM - AMMONIA	1992-03-05
129000-3 BLUE WINDEX	1994-06-27
478 ALKA-SELTZER TABLETS	1986-07-10

Docs: where you can upload Safety Data Sheets and documents that you want to store on your Keenan SDS site.

To Add a Safety Data Sheet or a Document:

If the Safety Data Sheet is saved on your desktop, click over it and drag it into the **Drag & Drop** area.

NOTE: You can upload several Safety Data Sheets at once by dropping a zip file into the **Drag & Drop** area.

Next, you will see the sheet(s) appear with the pending status in the **Upload Queue** area.

Click over the pending document to finish the upload process.

Keenan’s Loss Control services promote safety awareness, and assist in the identification of conditions which may pose a risk of injury. We do not suggest that following our recommendations will eliminate all risk of injury or will result in improved loss experience.

USING YOUR COMPREHENSIVE HAZARDOUS MATERIALS INVENTORY

In addition to fulfilling the Hazard Communication Standard requirement for the maintenance of an inventory of hazardous materials in the workplace, this inventory can be used as a management tool to better control the on-site and storage of hazardous materials.

The following information will serve as a guide to obtaining the greatest benefit from this inventory:

INVENTORY USES

To Assist With The Hazardous Materials Business Plan Reporting Requirements

State law requires reporting to the local administering agency when hazardous materials are stored at an individual site in quantities greater than 500 pounds (solid), 55 gallons (liquid), or 200 cubic feet (gas at standard temperature and pressure). These are the threshold planning quantities. The inventory can be reviewed to determine if those quantities are exceeded at any location. First, look at the "quantity" and "Container Size" columns for numbers exceeding these values. Next, add all similar items at the individual site(s) such as all combustible or water based paints, or all motor oil, or any other materials, and then determine if these aggregate quantities exceed the threshold planning quantities for each type of material. Contact your administering agency for their specific reporting procedures.

To Determine The Hazardous Materials To Be Included In Your Hazard Communication Training

Match the chemicals listed at each location with the classification of employees working at the site. This will assist you in determining the need for Hazard Communication training.

To Assess Compliance With The Hazard Communication Standard

Cal/OSHA requires a Safety Data Sheet (SDS) for every hazardous material used in the workplace. Match listed items with the appropriate SDS. If the SDS is not currently on-site, it must be obtained from the distributor or manufacturer. Chemicals lacking an SDS on-site are probably:

- Donated
- Purchased by an employee on their own
- Old materials used by a former employee and "grandfathered" into the location
- Materials left by employees which may be needed at another location
- Inherently, "waste like" and abandoned with no intended use; and therefore, classed as a hazardous waste

Look for unknown items or manufacturers in the inventory. These chemicals may have incomplete or missing labels, a violation of the Hazard Communication Standard.

To Assess Risk Or Design Your Fire Prevention Plan

Make general summaries of similar materials at each site, i.e. all combustible paints, all flammable spray cans, all corrosives, etc. Determine if they are in excess of the material needs of that site?

Is there excessive risk at a particular site? (E.g. Where are large quantities of flammable liquids stored? Or compressed gases?) How can these materials be addressed in your fire prevention plan?

To Identify Extremely Hazardous Substances

Most commonly, chemicals found in the science labs vary in their hazard severity. Chemicals denoted in the inventory on diskette that are recommended for removal indicate that these substances may be extremely hazardous. Special precautions should be taken when handling and storing these substances. These chemicals should be evaluated to determine if the value of a specific chemical outweighs the risks presented.

To Assist With The Determination Of Spill Response Needs

Cal/OSHA, as well as other regulatory agencies, requires facilities handling and storing hazardous materials to have procedures and equipment in place for responding to spills. The type and quantity of hazardous materials at your facilities determines the procedures and the type of spill response materials and equipment needed. Selective absorbents are commercially available to handle various types of spilled products (i.e. corrosives, oils, solvents, etc.). Personal protective equipment may also be necessary to handle a spill. You can use the inventory to determine your spill potentials. The hazard type listed in the inventory for each chemical product will help you determine the type of spill absorbent materials to use. The Safety Data Sheets you are required to have available for all hazardous materials in the inventory will not only guide your spill response, but also provide information regarding personal protection.
